

26 — End-to-End System Map (VERIFIED)

Patient → care

PATIENT (Employee + HospitalUID + QR)

↓ REGISTRATION (verify → register → card)

↓ OPD (dept + TOKEN:<CODE>-NNN + OPD/YYYY/NNNNNN)

↓ CONSULTATION (Diagnosis + signed Prescription)

└─ LAB (Order LAB/YYYY/NNNNN → Sample SYY-NNNNNNN → Result → Pathologist verify → REPORT → Doc)

└─ PHARMACY (signed queue → FEFO dispense → stock decrement → StockTransaction)

└─ THERAPY (course [DIRECT|OPD|IPD] → sessions → Nurse perform → per-sitting charge)

└─ IPD (REQUESTED → resolve → ALLOCATED bed → ward notes/transfers → Doctor discharge → summary)

Money (all billable activities converge)

SERVICE PRICING (catalogue + effective-dated versions) [pharmacy: batch issue-price instead]

↓ CHARGE (ChargeItem PENDING, qty × rate, discount 0, cites servicePriceId)

↓ PATIENT LEDGER (per-employee aggregation)

↓ PAYMENT (Receipt RCPT/YYYY/NNNNNN, CASH|UPI|CARD)

↓ RECEIPT PDF (Puppeteer) → charges PAID

Supply chain

INVENTORY (Medicine → Batch → PharmacyStock, FEFO-ordered, expiry-scanned)

↓ REQUISITION (StoreManager) ↓ APPROVAL (ProcurementOfficer/Admin)

↓ PO (gated on Approved) ↓ Supplier ↓ GRN (ONLY batch creator, verified)

↓ BATCH/STOCK ↓ transfer ↓ PHARMACY ↓ DISPENSING (→ StockTransaction + charge)

Each arrow resolves to a controller → service → model in §§07–15 and paths in §17.

Unmapped integrations (gateway, devices, S3, BullMQ, Sentry) are NOT VERIFIED present.

One-page visual (same facts as above, Mermaid)

Added for onboarding/management — this is a rendering of the exact same verified flow above (Patient → Care, Money, Supply chain), not a new source of truth.

Role tags are per `PERMISSION_GRANTS` in `apps/api/prisma/seed.ts`. Ward tier is deliberately left generic ("Bed / Ward Allocation") rather than naming a specific room class — pricing/eligibility detail lives in `FacilityEligibilityRule`, not here.
